
Claim 2. (AMENDED)

The invention of Claim 1 additionally comprising one or more additional heat exchangers

Wherein said enclosure additionally contains one or more heat producing components, and

Wherein each of said additional heat exchangers transfers heat from one or more of said heat producing components to said cooling fluid.

Claim 3. (AMENDED)

The invention of Claim 1 additionally comprising a controller unit and sensors

wherein said sensors detect various temperature and flow rates within said

enclosure cooling unit,

~~XX~~ said sensors provide information regarding said detected temperature and flow rates

to said controller,

said controller provides voltages and currents to electrical and/or electronic

components within said enclosure cooling unit, and

said controller utilizes said detected temperature and flow rates to determine said

voltages and currents.

Claim 5. (AMENDED)

The invention of Claim 4 additionally comprising one or more additional heat exchangers

wherein said enclosure additionally contains one or more heat producing components, and

wherein each of said additional heat exchangers transfers heat from one or more of said heat producing components to said cooling fluid.

Claim 6. (AMENDED)

The invention of Claim 4 additionally comprising a controller unit and sensors wherein said sensors detect various temperature and flow rates within said enclosure cooling unit,

said sensors provide information regarding said detected temperature and flow rates to said controller,

said controller provides voltages and currents to electrical and/or electronic components within said enclosure cooling unit, and

said controller utilizes said detected temperature and flow rates to determine said voltages and currents.

Claim 8. (AMENDED)

The invention of Claim 7 additionally comprising one or more additional heat exchangers

P3

wherein said enclosure additionally contains one or more heat producing components, and

wherein each of said additional heat exchangers transfers heat from one or more of said heat producing components to said cooling fluid.

Claim 9. (AMENDED)

The invention of Claim 7 additionally comprising a controller unit and sensors wherein said sensors detect various temperature and flow rates within said enclosure cooling unit,

said sensors provide information regarding said detected temperature and flow rates to said controller,

said controller provides voltages and currents to electrical and/or electronic components within said enclosure cooling unit, and

said controller utilizes said detected temperature and flow rates to determine said voltages and currents.

Claim 10. (AMENDED)

The invention of Claim 7 wherein
said one or more Peltier devices transfer heat from said third heat exchanger to
said second heat exchanger.

Claim 11. (AMENDED)

The invention of Claim 7 wherein

said one or more Peltier devices transfer heat from said third heat exchanger to said first heat exchanger.
